

The columns represent a measurement from the bottom of the first row of siding to the top of the next coarse. We have gone to 12' with these charts. After that it probably would be better to start a new baseline. Take a look at the 8 1/4" chart. In the 1 5/16 overlap column there is a 98 7/16 dim., if you use this with the first plank hanging below the sheathing to form a drip edge, (to stop water from wicking into the sheathing) you will come pretty close to an 8 ft. eave versus the 1 1/4 overlap. Look at the charts in this respect and they may give you a lot of help.
